

Speaker Stand

A3SS1 loudspeaker stands are designed and manufactured in the UK to perfectly complement our passive and active speakers. They use a Morse taper to optimally grab and 'lock' the loudspeaker into position and provide a solid and stable platform while also allowing for fast and easy toe-in adjustments.

The stands feature a cable conduit that matches our bottom-fed speaker connectors. And the stand base doesn't extend much beyond the speaker—a combination that allows the speakers to be positioned very close to walls when space is limited.

Our stand designs have been carefully considered alongside our speakers to precisely support them at their center-of-mass, putting the whole system into mechanical balance which enables our amplifier-on-top design without adding bulky heavy stands.

If you want to place audio3 loudspeakers on stands (and we do recommend that), there is no better option sonically or visually than the audio3 A3SS1 stands.

Technical Specifications

Material	Aluminium (matt silver)
Weight	2.5 kg.
Dimensions (H x W x D)	78 x 24 x 30 cm note: listening height (90 cm)
Cabling Holes (max. dia)	Top = Bottom =
Isolation	Sound-isolation spiked feet (M6) provided with matching floor protector pucks.

Features

- hides cables for a 360 walk-around design
- a Morse taper makes a secure but easily adjustable swivel system to adjust toe-in.
- holds the speaker at its centre of mass
- incorporates a removable wire cowl so you don't have to struggle to wire up your system with the amplifier-on-top
- adjustable isolating spikes and matching floor protectors provided

Suggested Placement
